Nuclear Medicine Test

Date of Test: _____ Test Time: _____

Welcome

Welcome to the Licking Memorial Hospital (LMH) Radiology Department. Your doctor has requested a nuclear medicine test. This test uses a radioactive substance to produce images and measurements of organs and tissues. A certified technologist will perform the test. A radiologist (a doctor who specializes in medical diagnosis by X-ray) will read it.

A nuclear medicine test is used to look at:

- Kidney function
- Blood flow and heart function
- Lungs for respiratory and blood flow problems
- Function of the gallbladder
- Bones for fracture, infection, arthritis, or tumor
- The presence or spread of cancer
- Bleeding in the bowel
- The presence of infection
- Thyroid function

Allowing Time

The test usually takes 30 to 90 minutes. Some tests are finished in one time period. For other tests, you may need to receive a radioactive substance and return at a later time. You also may need to return in several days for more pictures. You will be told more about this during the appointment for your test.

Preparation

Some of the nuclear medicine tests require special preparation. See below:

- Bone scan
 - No preparation. After the injection, you will return 3 hours later for the test.
- Gallbladder test (Test can take 60 to 180 minutes)
 - Do not eat or drink for 4 hours before the test.
 - Do not take any opioid-based pain medication for 4 hours prior to the exam.
- Gastric emptying (Test usually takes between 2 and 4 hours)
 - Do not eat or drink for 12 hours before the test.
 - Hold prokinetic medication, such as Reglan® (metoclopramide) and Motilium® (domperidone), for 2 days
- Kidney test (Test can take 30 to 90 minutes)
 - Drink at least 12 ounces of water 30 minutes prior to the exam.

Thyroid test (Two-day test)

- Do not take thyroid medication for 4 to 6 weeks prior to the test.
- Tell your doctor if you have had any tests using contrast media (CT dye) within the last 8 weeks.
- Day 1 – take the pill provided by Radiology. Return 4 hours later for the 15-minute test.
- Day 2 – Return to Radiology for a thyroid scan. Please allow 45 to 60 minutes to complete the scan.

Other: _____

Your Role

1. You will need to lay as still as you can for the test. This will help get the best pictures.
2. If you are pregnant or think you might be pregnant, be sure to let your doctor know before the test begins.

Registration

Please report directly to the Radiology Department on the LMH First Floor at least 15 minutes prior to your scheduled test time.

During a Nuclear Medicine Test

- You will be given a radioactive agent called a radiopharmaceutical. The agent is a substance that can be injected, swallowed, or inhaled. Different agents are used to study different parts of the body.
- There is no reaction to the agent.
- The agent travels through your body, producing gamma rays (invisible radiation). The gamma rays show the location of the agent in the body.
- Special equipment finds the gamma rays and records the rays as flashes of light. These are used to create pictures of the part of the body being studied.

After the Test

You may return to your normal routine. There are no side effects to the radioactive substance. It will leave your body through your urine and stool.

Finding Out the Results

The radiologist will study the test and give the findings to your doctor. Your doctor will discuss the results with you.

Reminder

- If you have any questions about your test, please call (220) 564-4731.
- Report to the Radiology Department on the LMH First Floor 15 minutes before your test.
